Pediatric Home Service Launches First Online Education Course to Benefit Health Care Community

St. Paul, Minn. – Recognizing an opportunity to further improve education for the health care community, Pediatric Home Service (PHS) launched the first course in a new online learning program. The online format allows clinicians, no matter where they are located, to complete innovative and engaging online courses for contact hours.

“This education is unique because no one else in our industry is using technology the way we are,” said Rebecca Long, PHS Director of Therapies and Education. “Not only is our first course engaging and interactive through the use of high quality videos, graphics and animation, but it makes the training accessible to clinicians who may not be able to travel to our office for education.” An added benefit to those who live in the area is an option to come into our office for hands-on guidance after completing the online training.

With nationwide efforts in health care focused on achieving the triple aim of improving the health of the population, reducing the cost of overall care and improving the patient experience, PHS recognized that each of these initiatives can be impacted through education of the clinical teams providing the care. This realization brought about the desire to build an online education program.

While PHS’s patient population lives in the home, online learning benefits a much larger population than just those working in home care. The current course and all future courses in the program are designed for health care staff in hospitals, clinics and student nurses.

With future courses geared towards a myriad of clinical roles such as nurses, respiratory therapists, dietitians and even PCAs, PHS is confident that courses will fill a void in the community. “We know there is an unmet need for targeted education on patients who are supported by medical equipment at home. We wanted to be able to share the resources we’ve created, ensuring clinicians have access to top-of-the-line education on complex patient care,” said Long.

Following up our Infusion Basics course will be Trach Tube Essentials and Blood Sampling. Visit www.PediatricHomeService.com/Education/Courses to watch a demo and enroll in the new course.

About Pediatric Home Service

Based in St. Paul, Minn., Pediatric Home Service is an independent pediatric home care company that helps children with medical complexities and technology dependencies live safely and successfully

where they're most comfortable, at home with their families, rather than in a hospital. Pediatric Home Service has been partnering with health care professionals and family caregivers for more than two decades to deliver compassionate, specialized, high-quality care to children with special medical needs.
